

Amendment to the Specification

On page 5, please replace the paragraph in lines 19-25 (second paragraph of the "Description of Preferred Embodiments") with the following:

The interior of the implant body 1 is a single interior cavity 9, open at the top via an upper orifice 10 and open at the bottom via a lower orifice 11. The interior cavity 9 therefore provides communication between the upper orifice 10 and the lower orifice 11 provided in the upper larger [[face]] wall 2 and the lower larger [[face]] wall 3 of the implant body 1.
